

HELP FOR HOLD VIEWER

PURPOSE: The Hold Viewer App is used as a visual aide to demonstrate entry into a Holding Pattern and to make a recommendation on the type of entry to be used.

When to Use the Hold Viewer App

To visualize Hold entry from multiple perspectives

This is a nice visualization tool to use when talking about hold entry. It is a lot easier to just point at the picture than to try to describe the hold by talking about it.

How to Use the Hold Viewer App

- Select the Aircraft Heading
- Select the Hold Course
- Select the Turns Type - Standard or non-Standard

- Review the Recommendation

To enter the Course or Heading you can use the slider or keyboard

The Hold Course is the course inbound to the Hold Point. This is the Blue line with the Blue arrow.
